Datrend Systems releases Automation Option for vPad-Mini

Datrend Systems Inc. is pleased to announce the release of an Automation Option for their vPad-Mini Electrical Safety Analyzer.

The automation option enables users to carry out automated or semi-automated electrical safety tests that comply with IEC62353, IEC61010 and NFPA 99 standards. Once tested, a device ID and its test protocol are retained in memory for future recall and retesting; additionally, users can create or edit their own test sequences. Using the supplementary reporting option, test reports can be either printed on a receipt-styled Bluetooth printer or transferred to a PC or mobile device for archiving or uploading to a CMMS System.

Ron Evans, President of Datrend Systems stated, "Adding the automation option takes this entry-level product to a new level. With the ability to select the appropriate standard, mains on applied part testing, and automation, along with record storage and transfer, there is really no other product at this price point currently on the market that comes close to competing with vPad-Mini. For users who require Automated PM Inspection or full CMMS Integration, vPad-ES 2 or vPad-Rugged2 would still be the products of choice".
