Datrend Systems launches new Security App for the vPad Platform

Datrend Systems is pleased to announce the launch of a new security app for the vPad Platform. vPad-Secure is designed for organizations who need the ability to control workflow from a central location. With four levels of security, vPad-Secure enables administrators to set the level of access for their team and pre-define the maintenance procedures and tests to be used.

Mark Miller, VP of Engineering commented "We have had several requests from customers who were looking for a solution to lock down their maintenance procedures. We listened, we considered, we executed and within 6 weeks of the first request we are launching this new product."

In addition to vPad-Secure, an upgraded version of vPad-Check is being launched. This upgrade to the automated maintenance App includes streamlined operation and enhanced video and image capabilities, enabling users to embed manufacturer's inspection procedures and manuals directly into maintenance checklists.

Datrend will be demonstrating both Apps on booth #818 at this years AAMI show in Denver, CO. Ron Evans, President and VP of Product Development will be on-hand to discuss CMMS integration with Biomed / Service Departments who are looking to fully automate their PMs.
