Datrend Systems releases vPad-IDE

Datrend Systems Inc. is pleased to announce the release of vPad-IDE, an Integrated Development Environment that enables users to create preventative maintenance inspection procedures and test sequences that will run on the Vision Pad™ platform.

vPad-IDE comes with a built-in library of generic PM templates to which users can add device-specific inspections, instructions, images and tests to satisfy OEM or institutional requirements. PM procedures can be evaluated on a PC before downloading them to vPad tablets via USB, Bluetooth or the Internet. The IDE also satisfies risk management requirements through document revision control and approval.

Mark Miller, Vice President of Engineering at Datrend Systems stated, "We have seen a huge growth in customers that are looking to automate their preventative maintenance processes in order to save time and money, and to improve data collection and traceability. The release of vPad-IDE enables vPad users to build and test PM procedures offline then deploy them to all technicians within their organization. Best of all, vPad-IDE can be obtained free of charge from our website www.datrend.com".
